

Big ideas for the future of energy: hopes and aspirations

Video transcript – Sergio Kapusta, Shell's Chief Scientist, Materials.

Hello. I am Sergio Kapusta, Shell's Chief Scientist, Materials.

I would like to invite you to take part in a live webchat, which will look at big ideas for the future of energy.

The webchat will take place on the 22nd July and I hope that you will be able to join me and my wider team, including a range of experts from Shell, as we debate this critical issue with people from across the world.

Global energy demand is rising and so are consumers' expectations – more people want energy from cleaner sources. In building a better energy future we all have a part to play. So, what are the big ideas that will shape the future of energy?

Who is driving innovation in the energy systems of the future? Which energy technologies will progress most within the next ten years? How can we accelerate the pace of change? What are the challenges in commercializing new energy technologies?

These are the issues that need to be tackled in the near future. In our webchat we'll be addressing questions like these from participants across the world.

As one of the world's major energy companies, and as a global leader in innovation and development, Shell has a role to play in nurturing the best ideas for the energy industry out of their infancy, whether they come from within the company or from the outside.

So, we want to debate these questions with you. By registering now, and then logging onto the live webchat on Thursday 22nd July, you can have your say.

We look forward to hearing your views and answering your questions on this critical issue at the heart of the energy industry.
